

Copy That Converts: Ads & Emails

Tested AI prompt pack — Word + PDF

Copy That Converts: Ads & Emails

Direct-response patterns that have worked for a century, applied to AI. Fill the brackets, kill the AI-tell, and the copy will sound like a writer - because the structure is doing the work.

Prompt count: 10 · Category: marketing · Price: GH¢ 85

Ad headline bank (AIDA)

WHEN TO USE

Starting a new ad campaign.

THE PROMPT

Write 15 ad headlines for [PRODUCT/SERVICE] targeting [AUDIENCE] who wants [OUTCOME] and fears [PAIN]. Use these proven patterns, 3 each: (1) specific-number results, (2) how-to, (3) before/after, (4) objection crusher, (5) curiosity gap. Max 8 words each. No clickbait the ad can't deliver on. Mark the 3 strongest.

CUSTOMIZE

Use real numbers from your results, not invented ones.

WHAT GOOD LOOKS LIKE

A headline bank you can A/B test for weeks.

Sales email - problem-agitate-solve

WHEN TO USE

Launching a promo or new offer to your list.

THE PROMPT

Write a sales email for [OFFER] to my list of [AUDIENCE]. Use the Problem-Agitate-Solve structure: open with the problem they feel daily [PROBLEM], agitate with 2 sentences on what it costs them, present [OFFER] as the solution with 3 bullet benefits, add urgency [DEADLINE/SPOTS], close with one clear CTA. Keep it 180-220 words, plain language, no em-dash overuse, no 'unlock the power'.

CUSTOMIZE

Write the problem from real customer conversations.

WHAT GOOD LOOKS LIKE

An email that reads like it was written by one human to one human.

Landing page hero + subhead

WHEN TO USE

Building or rebuilding a landing page.

THE PROMPT

Write 5 hero headline + subheadline pairs for [OFFER] to [AUDIENCE]. Each pair must: (1) promise one specific outcome, (2) name the audience, (3) remove one objection in the subhead (price, time, risk). Add a 5-word CTA button text for each. Formats: outcome-first, enemy-first, time-bound, cost-flip, contrarian.

CUSTOMIZE

Steal the exact words your customers already use.

WHAT GOOD LOOKS LIKE

A hero section that passes the 5-second skim test.

Abandoned cart email sequence

WHEN TO USE

Carts are dying and you want the revenue back.

THE PROMPT

Write a 3-email abandoned cart sequence for [PRODUCT] at GH¢ [PRICE]. Email 1 (1 hour): friendly reminder + the main benefit. Email 2 (24 hours): address the top 2 objections [OBJECTIONS] with proof (reviews/results). Email 3 (72 hours): last chance - [INCENTIVE e.g. free shipping/discount] + gentle scarcity. Each under 100 words, distinct from the others.

CUSTOMIZE

Use real objection-handling from your customer service chats.

WHAT GOOD LOOKS LIKE

A sequence that quietly converts 5-15% of lost carts.

Facebook/IG ad copy - 3 angles

WHEN TO USE

Launching social ads.

THE PROMPT

Write 3 ad variations for [PRODUCT] on [PLATFORM - Facebook/Instagram] targeting [AUDIENCE]: (1) hook-first - stop the scroll with a bold claim, (2) social-proof - lead with a customer result, (3) empathy - lead with their struggle. Each: 40-word primary text + 2 headlines + 1 CTA. No hashtags, no emojis except one max, no 'Are you tired of...' openings.

CUSTOMIZE

Pair each angle with a different creative (image/video).

WHAT GOOD LOOKS LIKE

3 ads that test distinct psychological levers.

Product description that sells

WHEN TO USE

Product page copy is flat.

THE PROMPT

Rewrite this product description: [PASTE CURRENT COPY]. New version must: (1) open with the outcome, not the features, (2) translate every feature into a benefit with a mini story, (3) include a 'who this is for / who it's not for' section, (4) end with a risk-reversal line (guarantee/refund). Keep the same length or shorter. Match tone: [TONE].

CUSTOMIZE

Steal specifics from your best customer reviews.

WHAT GOOD LOOKS LIKE

A description that sells the transformation, not the thing.

Objection-handling FAQ block

WHEN TO USE

Prospects ask the same 5 questions.

THE PROMPT

Write an FAQ block for [OFFER] answering: [LIST 5 QUESTIONS - e.g. 'is this for beginners?', 'what if it doesn't work?', 'how long does it take?', 'do I need any tools?', 'what exactly do I get?']. Format: question as the header, 2-3 sentence answer that sells without sounding salesy, each ending with a mini-CTA where natural. Under 40 words per answer.

CUSTOMIZE

Use the actual questions from your DMs and comments.

WHAT GOOD LOOKS LIKE

An FAQ that handles objections while they're still curious.

Retargeting ad for engaged visitors

WHEN TO USE

People visited but didn't buy.

THE PROMPT

Write retargeting ad copy for people who visited [PAGE - e.g. the pricing page] but didn't buy [PRODUCT]. Assume they're interested but hesitant. Angle: 'you were this close' without being creepy - offer [BRIDGE - free guide, demo, smaller version, deadline]. 30-word primary text, 2 headlines, 1 CTA. One line must address the likely reason they left [REASON].

CUSTOMIZE

A smaller offer beats a discount for cold-ish leads.

WHAT GOOD LOOKS LIKE

A retargeting ad that warms, not harasses.

Launch email sequence (3 emails)

WHEN TO USE

Launching anything to a cold-ish list.

THE PROMPT

Write a 3-email launch sequence for [OFFER]: Email 1 'the announcement' - what it is, who it's for, why now. Email 2 'the proof' - results/testimonials/story. Email 3 'the close' - recap benefits, deadline [DATE], what they miss if they skip it. Each 150-200 words, no hype words ('game-changer', 'revolutionary', 'insane').

CUSTOMIZE

Space them 24-48 hours apart.

WHAT GOOD LOOKS LIKE

A launch sequence with a narrative arc, not three ads.

A/B test copy variant generator

WHEN TO USE

You have a winner but want more.

THE PROMPT

Here is a winning piece of copy: [PASTE]. Generate 4 test variants: (1) same message, shorter by 40%, (2) same message, more specific (add numbers/detail), (3) flipped to negative framing (what they lose by NOT acting), (4) first-person voice (from a customer's mouth). Keep the CTA identical. Note which element each variant changes so I can learn what moved the needle.

CUSTOMIZE

Run one variant at a time against the control.

WHAT GOOD LOOKS LIKE

A clean A/B test plan with isolatable variables.
