

Go-Live Guide Deploy · Paystack · CI

The three steps that need your accounts: deploy the built marketplace to Vercel, turn on real MTN MoMo and Telecel Cash payments with Paystack (Ghana), and enable the CI pipeline. The code is already written and tested — this guide covers only the account-side setup.

Date: August 26, 2026

Time: ~1 hour + Paystack verification (1-3 days)

Accounts needed: Vercel · Paystack (Ghana) · GitHub

Code status: built & E2E-tested

Contents

- 1 · Deploy to Vercel (~15 min)
- 2 · Real mobile money via Paystack (~1 h + verification)
- 3 · Enable the CI workflow (~5 min)
- 4 · Production data: Supabase (required for real launch)
- 5 · Launch-readiness checklist
- 6 · Troubleshooting

1 Deploy to Vercel

The code is committed and pushed. This section covers the account-side deploy (~15 minutes).

Before you start

- Create a Vercel account at vercel.com — sign up with your GitHub account.
- If the app branch isn't merged yet: open a PR from `arena/01a03b32-my-personal-website` to `main` in GitHub, merge it, then import. (Vercel deploys `main` by default; you can also pick the branch during import.)

Deploy steps

1. Vercel → Add New... → Project → import `my-personal-website`.
2. Framework: Next.js auto-detected. Keep defaults (Build: `npm run build`, Root: `./`).
3. Environment Variables → add:

Key	Value	Notes
APP_SECRET	<code>openssl rand -hex 32</code> output	Signs sessions, carts, download tokens — keep secret
NEXT_PUBLIC_SITE_URL	<code>https://<your-app>.vercel.app</code>	Update after first deploy; used for email links + sitemap
DOWNLOAD_LINK_TTL_SECONDS	172800	Optional — 48 h default
RESEND_API_KEY	<code>re_...</code> (optional)	Real transactional email; without it emails are logged

4. Deploy. First build $\approx$ 2-3 minutes → you get a live URL.
5. Smoke test the demo flow on the live URL: `shop` → `add pack` → `checkout` → MTN MoMo → “Approve payment” (demo) → downloads unlock.
6. Log in as admin (`admin@cudjoe.digital` / `admin123`) → Admin → revenue analytics.
7. Set the final `NEXT_PUBLIC_SITE_URL` → Redeploy. Optional: add a custom domain in Settings → Domains.

Demo caveat: with no Paystack key, the “Approve payment” button simulates the phone prompt. Section 2 replaces it with the real MTN MoMo / Telecel Cash flow.

2 Real mobile money via Paystack

The Paystack integration is fully implemented (initialize → webhook → unlock). You supply the account, keys and webhook URL.

2a · Create & verify your Paystack (Ghana) account

1. paystack.com → Create free account → country: Ghana.
2. Complete business settings: name, registration, address, settlement bank account, phone.
3. Complete KYC (business registration + director ID). Verification takes 1–3 business days — start now; other steps can run in parallel.
4. Dashboard → Settings → API Keys & Webhooks → copy Secret Key (sk_live_...) and Public Key (pk_live_...).

2b · Set keys on Vercel

1. Vercel → Settings → Environment Variables → Production: PAYSTACK_SECRET_KEY + PAYSTACK_PUBLIC_KEY.
2. (Optional fallback gateway) FLUTTERWAVE_SECRET_KEY, FLUTTERWAVE_WEBHOOK_SECRET, PAYMENT_GATEWAY=flutterwave.
3. Redeploy. The code auto-switches from the demo gateway to real Paystack — no code changes. Webhook signing uses PAYSTACK_SECRET_KEY.

2c · Configure the webhook (unlocks downloads instantly)

Paystack dashboard → Settings → API Keys & Webhooks → Webhook URL:

```
https://<your-app>.vercel.app/api/webhooks/paystack
```

1. Save (charge.success is enabled by default).
2. Test: “Send test webhook” on the same page → Vercel Functions → Logs shows POST /api/webhooks/paystack returning 200.
3. The handler verifies the HMAC-SHA512 signature, is idempotent (duplicates can’t double-fulfill) and acknowledges fast.

2d · Real test purchases (required before launch)

#	Product	Payment	Verify
T1	Prompt pack (GH¢ 75)	MTN MoMo 024/...	Paystack page → approve with PIN → Word + PDF download
T2	Ebook (GH¢ 185)	Telecel Cash 020/...	EPUB download → switch to PDF in My Downloads
T3	Bundle (GH¢ 319)	MTN MoMo	ZIP downloads and extracts (packs + ebook + README)
T4	Failure drill	MTN MoMo (decline)	“Payment wasn’t completed” page; cart preserved; no charge
T5	Invalid number	020 with MoMo	Inline validation blocks checkout before payment

Production flow: checkout → Paystack initialize (GHS, mobile_money, channel per your selection) → buyer approves USSD/app push with PIN → charge.success webhook → signature verified → order paid → downloads + email unlocked → Paystack redirects back to your pay page (callback_url pre-set with the

order id) → confirmation + downloads.

2e • Refunds

- Gateway side: Paystack → Transactions → Refund (back to the buyer's wallet).
- Store side: admin → Orders → refunded orders are rejected by the download route automatically (403). Keep both in sync.

3 Enable the CI workflow

The file `.github/workflows/ci.yml` exists in the project but wasn't pushed (this sandbox token lacks the workflows permission). Push it with your own account.

Option A — push from your machine

```
git add .github/workflows/ci.yml
git commit -m "Enable CI: typecheck + build on push"
git push
```

Option B — create it in the GitHub web UI

Repo → Add file → Create new file → path `<code>.github/workflows/ci.yml</code>` → paste:

```
name: CI

on:
  push:
    branches: [main]
  pull_request:

jobs:
  build:
    runs-on: ubuntu-latest
    steps:
      - uses: actions/checkout@v4
      - uses: actions/setup-node@v4
    with:
      node-version: 20
      cache: npm
      - run: npm ci
      - run: npm run typecheck
      - run: npm run build
    env:
      APP_SECRET: ci-secret
      NEXT_PUBLIC_SITE_URL: http://localhost:3000
```

1. Commit → Actions tab runs CI (≈3 min). Green = live.
2. (Optional) Protect main: Settings → Branches → require the “build” check.

4 Production data: switch to Supabase (required before real launch)

The built-in demo database (.data/db.json) cannot persist writes on Vercel's serverless filesystem. Real sales need the Postgres layer.

1. Create a free Supabase project (supabase.com → New project).
2. SQL Editor → paste db/schema.sql (already in the repo) → Run.
3. Storage → buckets: product-files (Private) + samples, covers (Public).
4. Upload product files into the buckets following the paths in lib/catalogData.ts (e.g. prompts/pkg-fre-01/pack.pdf).
5. Set env vars on Vercel: NEXT_PUBLIC_SUPABASE_URL, NEXT_PUBLIC_SUPABASE_ANON_KEY, SUPABASE_SERVICE_ROLE_KEY, SUPABASE_JWT_SECRET.
6. Swap the data layer: replace lib/store.ts + lib/catalog.ts implementations with Supabase queries keeping the same exported functions (≈1-2 days).
7. Re-run tests T1-T5 against Supabase, then delete .data/db.json.

5 Launch-readiness checklist

Item	Status
Vercel deploy live; custom URL set; NEXT_PUBLIC_SITE_URL updated + redeployed	☐
Paystack Ghana verified; live keys on Vercel; webhook URL registered	☐
Webhook test: charge.success in Vercel logs with HTTP 200	☐
T1 prompt pack via MTN MoMo — paid, Word+PDF downloaded, email received	☐
T2 ebook via Telecel Cash — EPUB downloaded, PDF format-switch works	☐
T3 bundle via MoMo — ZIP downloaded and extracted	☐
T4/T5 failure drills pass (declined payment page, phone validation)	☐
Refunds: gateway refund + admin order state sync tested	☐
Supabase adapter live — orders persist across restarts	☐
CI green on main; branch protection on (optional)	☐
RESEND_API_KEY set; receipt email arrives	☐
Support inbox + WhatsApp set up (real contacts in footer)	☐

6 Troubleshooting

Symptom	Cause → Fix
Checkout still shows the demo “Approve payment” button	PAYSTACK_SECRET_KEY missing (or not redeployed) → add key → Redeploy
Webhook returns 401 in logs	Signature mismatch — our handler signs with PAYSTACK_SECRET_KEY; ensure the live key matches the dashboard
Buyer pays but no downloads	Webhook URL wrong/unsaved, or charge.success disabled → re-check 2c; reconcile via admin or the /verify fallback endpoint
“Invalid phone number” on a valid number	Prefix/network mismatch — MTN: 024/054/055/059 · Telecel: 020/026/027/050
Orders disappear after a while	Demo DB on serverless — Section 4 (Supabase) is mandatory for production
410 “link invalid or expired”	Normal — links expire after 48 h; generate a fresh one from My Downloads
CI won’t run after pushing	Pushed via a token without workflows permission → push .github/workflows/ci.yml with your own account (Section 3)
